

Digital label cutting

RAYFILM has been producing labels since 1997 and keeps following trends in the production and meeting customers' requirements. High costs of new die-cutting tools do not allow us to be flexible when it comes to the customer's short-run production. Implementing of digital laser cutting technology enables us to promptly meet customers' requirements as for special label shapes or label sizes of short-run production. Since May 2014 we will be able to cut any labels size or shape up to 340 mm x 900 mm in formats up to 350 mm x 1000 mm.

Basic features

- maximum format size 350 x 1000 mm
- minimum format size 100 x 100 mm
- maximum label size 210x297mm for A4 sheet
- maximum label size 320 x 450 mm for SRA3 sheet
- any label shape
- any label size (up to max. size)
- laser spot size 0.17 - 0.21 mm

www.AnyLabels.eu

- Any label shape and size

You can define any label size or shape exactly by your needs. You can draw your label and send us in PDF, EPS, AI or CDR file, or you can make a choice from wide range of pre-defined shapes on our web page AnyLabels.eu and define label size only. You can combine different types of cutting. Labels can be produced from different materials exactly according your need.

- Simple and easy

If you send us your drawing, we will cut it exactly by your template. If you decide to use our template, you must define a label size only and than we will make drawing (PDF file) which will be sent to you.

- Prompt and flexible production

After your OK - "green light" labels will be produced from material which you chose and sent to you.

- Precise production

- No limits

You have a new chance to prepare your labels without any limits. You can define own label shape, own sheet's format, type of cutting. Now all depends on your creativity. Enjoy it.
