

OFFICE Labels

When you need ... more ...

Everybody knows white paper labels with permanent adhesive for regular office and home use. Few people know and utilize another properties of special labels for standard computer printers. These labels can be coloured or glossy finished, in addition fit with special adhesives (removable, opaque, etc.) so their use can easily cross the frontiers of your office. The name of Rayfilm range -OFFICE LABELS- means just the place where the final look of special labels arises.

Adhesives

Permanent – lasting

Removable – making the label easily removable

Opaque – with dark non-transparent layer

Finish

- White**
- matte uncoated
 - matte inkjet photo
 - glossy laser
 - glossy inkjet photo
- Colour**
- matte
 - fluorescent/ radiant

Permanent or Removable Adhesive ?

The most of applications need the labels to be strongly and permanently fixed on the surface. Nevertheless, there are certain situations requiring the label to be not only removed but also stucked somewhere else, naturally - leaving no residues. Rayfilm item R0102 is a labelstock with such a property. These labels help you to save a time spent by cleaning surface from adhesive and paper.

Office labels

Rayfilm Office labels for computer printers and photo copiers are always the right choice no matter what application they are used for. Whatever the application, whether you need to mark, sign or simply stick something together just choose the appropriate product from Rayfilms wide label range (white, opaque, removable, coloured, radiant or glossy labels). The OFFICE line covers a wide range of paper labels for computer printers and copiers. We cut more than 150 label sizes and you can find here both standard labels used in offices, and specialties for the most demanding applications. In the line there are white matte or glossy labels, removable labels, colour or fluorescent labels, labels made of inkjet photopaper; enhancing your colour printing, and many others.

Why Opaque Labels ?

Standard white labels are not fully opaque (non-transparent). You can increase their opacity by printing the whole label area but who does this in the office ? In the Rayfilm labelstock R0103 there is dark opaque layer fully covering the original texts and objects on the application surface. Thus you can re-label your files, cover CD/DVD brand names or simply use these labels as corrective media in any activity.

When you need more ...

Why Photo Labels ?

The labels coated by special ink receiving layer have got the same parameters as photopapers. With any inkjet printer you can print your own CD/DVD-labels, passport photos or labels where true colours and excellent quality of pictures are needed.

Double-Sided Business Cards and Tags

In Rayfilm label range there are several thick materials suitable for business cards and tags where high paper weight is important. We produce a special double labels that being printed and stuck together create professional looking double-sided business cards. The same way you can get not only business cards but also tags of any other size.

Colour and Radiant Labels ?

The most important label function is to bring some information. Some applications require label material similar to the application surface but on the other hand many slogans and signs must be visible at first sight. People print them on conspicuous labels made from coloured paper. Everybody who wants to attract attention by DISCOUNT, WARNING, CLEARANCE, DANGER, etc. uses radiant labels. Colour labels can also help you to sort labelled items or distinguish similar product groups.

What is the most favourite colour ?

The choice of colour is a specific human taste. Statistics bring the following figures : The unbeatable no one is standard yellow that is twice more demanded than the others. It is followed by standard green and radiant yellow and orange. The other colours are sold less but creates the integrated colour range (standard : yellow, red, green, blue / radiant : yellow, orange, red, green, pink)

When you need enriche & emphasize your products

RAYFILM R0160 is self-adhesive pearl metallic coated paper with embossed stripes of 3mm width for unique labels, which highlight the quality of the product. The stripes „put the seal“ of exclusivity and underline the product itself among the huge quantity of others.
